

Trim SEC

Sustainable Energy Community

Trim SEC is a volunteer group dedicated to increasing quality of life for the people in Trim through energy efficiency projects. Through our partnership with the Sustainable Energy Authority of Ireland, we can help retrofit homes and businesses to a B2 BER standard, improve transport in Trim, and decrease our town's reliance on fossil fuels.

Trim SEC will take care of the logistics for all projects, making it easier than ever for our town's homes, businesses, and community buildings to improve their energy efficiency.

HOME RETROFITS

Homeowners in Trim can get their homes retrofitted to reduce electricity bills and improve insulation. Residents who are in receipt of the fuel pension can access an 80% grant for their retrofits, while others can access a 35% grant.

BUSINESS AND COMMUNITY RETROFITS

Private businesses and public buildings can avail of a 35% retrofitting grant. This can reduce operating expenses for the building, and make it easy to bring the building up to a B2 standard. Together we can make Trim a "green" town!

SMART TRANSPORT

Trim SEC will be working on improving transport in Trim, including creating projects for safer cycling. We welcome ideas from the community!
